Research Details :

Research Title : Polymethy Imethacry late- montmorillonite composites: preparation,
Polymethy Imethacry late- montmorillonite composites: preparation,

Descriptipn : The objective of this work was directed to solve a problem of polymerization shrinkage in acrylic resin polymethylmethacrylate (PMMA) material. Organophilic montmorillonite (clay tone) was added up to 1% by weight to one commercial type of PMMA powder to form PMMA-MMTcomposite

Research Type : Thesis

Added Date : Friday, January 04, 2008
